HK Electric Fully Supports 2025 Legislative Council General Election

HK Electric welcomes and supports the appeal made by Chief Executive Mr. John Lee, at the launch ceremony of the 2025 Legislative Council General Election held today (23 October). He called on all eligible voters across Hong Kong to fulfil their civic and social responsibilities by casting their votes on 7 December, to elect members of the new Legislative Council.

HK Electric Managing Director, Mr Francis C.Y. Cheng said, “As the Chief Executive rightly pointed out, the upcoming 2025 Legislative Council General Election is a significant milestone for Hong Kong in accelerating economic development and improving people’s livelihoods. It is a matter that concerns every citizen. We will encourage our employees to actively cast their votes on polling day and elect Legislative Council members who are capable, visionary, passionate, and results-oriented — so that together, we can contribute to the city’s development and the well-being of its people.”

He emphasised that HK Electric has formulated contingency plans for various power supply scenarios within its service area to ensure a stable and reliable electricity supply to all polling stations and related facilities on the polling day, thereby supporting the smooth conduct of the election.

In addition, flexible work arrangements and special measures will be provided for employees who are required to be on duty or offer additional support on the day, to facilitate their participation in the voting process.

He remarked, “As one of Hong Kong’s major public utilities, HK Electric has always actively supported the city’s development needs and is fully committed to powering key projects within our supply area. These include the ‘Invigorating Island South’ initiative, the redevelopment of Queen Mary Hospital and Wah Fu Estate, and the proposed development at the former Lamma Quarry site — all of which require reliable electricity supply to support their progress.”

HK Electric will continue to drive energy transition and develop new power infrastructure such as smart grids, in support of transport electrification and the promotion of low-carbon living. These efforts aim to further advance Hong Kong's sustainable development and demonstrate our commitment to supporting the HKSAR Government's goal of achieving carbon neutrality before 2050.

HK Electric will, as always, maintain close collaboration with stakeholders including the HKSAR Government, Legislative Council, District Councils, community leaders, and members of various sectors. Leveraging our expertise in power supply, we will continue working hand in hand with the community to support Hong Kong's economic development and improve people's livelihoods, contributing to the city's prosperity and stability.
