電動車充電方案 EV CHARGING SOLUTION

Smart Power EV Charging Solution

to support e-mobility and
Hong Kong's development into
a low-carbon and smart city

To help reduce carbon emissions, improve roadside air quality and support Hong Kong's development into a low-carbon and smart city, HK Electric has been promoting the use of electric vehicles (EVs). On top of providing the public with free EV charging service, HK Electric also renders a one-stop free service to assist customers in implementing EV charging solutions.

EV Charging Solution Service

- Carry out site inspection on customers' power supply and metering arrangements
- Provide historical electricity load and spare capacity data for buildings with car parking spaces, and advise on whether the capacity of the existing supply point(s) can cater for the additional load of EV charging facilities based on the number of parking spaces
- Advise on the preliminary reinforcement work and the required facilities to be provided by the incorporated owners or management office if network upgrading is required
- Provide advice and requirements on metering arrangement and meter installation, and assist in connection of supply
- Provide information on common EV charging solutions
- Assist in applying for the Government's EV-charging at Home Subsidy Scheme (the "EHSS")
- Advise on the infrastructure design

How to Leverage the Solution

1 Customers to submit request online and provide documents required by HK Electric.

2 HK Electric to advise power supply and metering arrangements after site inspection (if required).

3 HK Electric to provide information on EV charging solution and assist in the Government's EHSS application.

4 Customers to submit application for connection of supply and install EV charging-enabling infrastructure and chargers if applicable.

5 HK Electric to connect supply within the same day of satisfactory inspection.
